What is ProgSoc?

The University of Edinburgh Programming Society aims to help people across all disciplines with none or very less previous programming experience to learn how to code and apply that knowledge to create something of value.
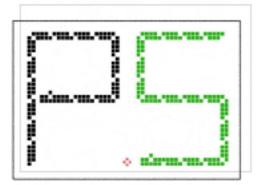

Who is a part of ProgSoc?

All interested members can be part of ProgSoc. Our society is open to any student in any year who wants to learn how to program Python. We feel that these skills are applicable in every field, as a lot of different fields like fintech and healthtech are emerging.

What do I do if I have coding experience already?

We are looking for interested teaching assistants to join our team and help the folks attending our sessions with any problems that they come across. We shall be quickly diving into the PyGame framework and you can learn how to build more advanced games if you feel you've already mastered the basics.
